The Sound of the Seas

Have you ever visited the seaside or the beach? Do you remember the sound of the waves coming in and going out to the sea?

That's the sound of the seas. Did you also know that if you wanted to, you can hear the sea anywhere else (even when there is no sea around!)

You will need:

- Do you have a shell or a conch?

If not, then make the shape of a little bowl with both your hands (to make it look like a shell).

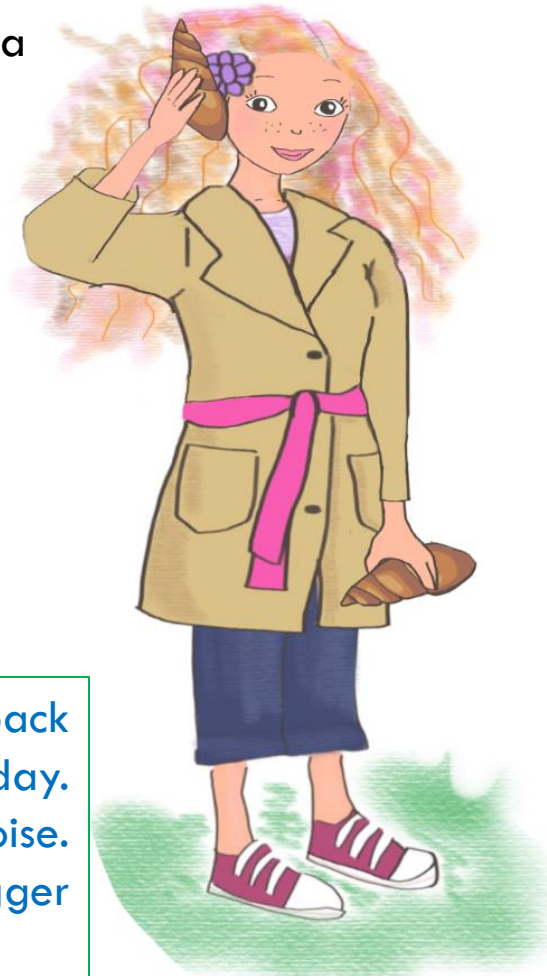

What to do...

Put the shell/your hands very close to your ear and move it back and forth slightly. Can you hear the sea now?

When your hands or shells are on your ears and you move them back and forth, it almost sounds the sound of the sea on a windy day. When we do this, it hides or takes away all the surrounding noise. Every noise reaches you through your hands or the shell. The bigger your hands or shells, the louder you can hear the sea.
